Elementari.io - create and share interactive stories

Elementari is a free online platform where anyone, especially kids, can read, write, share, and remix interactive stories with illustrations and sounds from professional artists around the world.

Learning by Creating

Elementari's development is influenced by the constructivist learning approach: Students learn when they create (plus it's just more fun). Furthermore, Elementari's authoring tool enables students to design stories with different media (text, illustrations, sounds, music, voiceovers), animations, and "coded" interactions.

Elementari supports project-based learning and 21st century learning skills. Students foster digital literacy skills and computational thinking concepts by creating interactive stories.

Principle #1: Learning

Teachers motivate students to learn with visuals, sounds, and interactions.

Principle #2: Creating

Learners engage in designing and making, not just passively listening and observing.

Principle #3: Personalizing

Learners create stories that are personally meaningful and relevant to them.

Principle #4: Sharing

Learners reflect as readers or writers in a community of pro and hobbyist creators.

Creative Collaboration

All stories are a collaboration between the writer and community artists. When a story is published, it automatically credit and notifies the artists whose art and music have been used. Elementari is about making these stories possible and to connect students with our community of professional writers, illustrators, and composers.
